

Veritas NetBackup™ 6.0 Server

Now from Symantec™

Innovative data protection

As the recognized leader for enterprise-class backup and recovery, **Veritas™ NetBackup Server** software is designed to help provide complete data protection for the most complex UNIX®, Windows®, Linux®, and NetWare® environments. Intuitive graphical user interfaces help enable organizations to manage all aspects of backup and recovery and to help maintain consistent backup policies that are deployed across the enterprise. Veritas NetBackup software provides database- and application-aware backup and recovery solutions for Oracle®, IBM® DB2® UDB, Microsoft® SQL Server, Microsoft Exchange Server, Microsoft SharePoint Portal Server, SAP NetWeaver, Sybase, Informix, and Lotus Notes® and Domino® Server.

Product Highlights

- **End-To-End Data Protection**—Data protection for all environments, from desktop to data center to vault.
- **Single Solution for All Platforms**—NetBackup helps you to consolidate and standardize your backup and recovery operations, protecting all major UNIX variants, Windows, Linux, and NetWare systems.
- **Unparalleled Performance**—Synthetic backups consume less network bandwidth and decrease the impact on the application host since files are backed up only once. Multiplexing up to 32 different data streams to a single tape drive helps to realize the maximum rated throughput of your storage hardware.

- **Automated Disaster Recovery**—The NetBackup Vault option automates the disaster recovery process by helping to simplify tape rotation and the creation and management of tape duplicates for offsite vaulting. NetBackup Bare Metal Restore™ streamlines the server recovery process.
- **Extensive Media Management**—Allows users to share an automated tape library between heterogeneous systems—UNIX, Windows, Linux, NetWare, or Network Attached Storage (NAS)—allowing NetBackup users to more effectively leverage their expensive tape and drive resources.
- **Security**—Secure your backup data by selecting from NetBackup software's 40-, 56-, 128-, or 256-bit encryption. NetBackup software's low-impact encryption option ensures the data is secure before it leaves the client. NetBackup Access Control offers the flexibility to restrict or provide specific access levels to NetBackup software's administrative functionality.

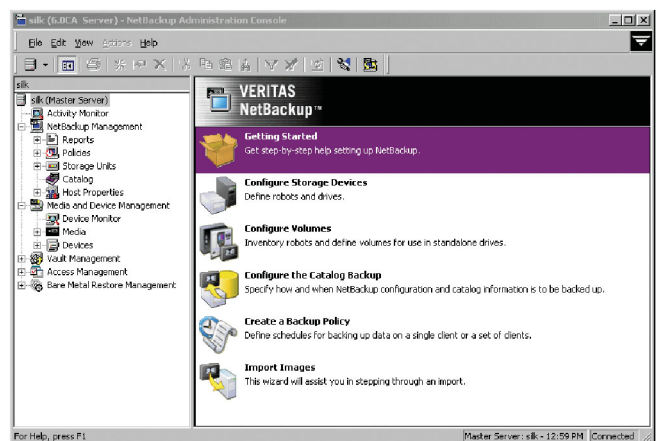

Figure 1. NetBackup Administration Console provides a single point of management that enables backup administrators to manage a larger number of servers more efficiently.

Fact Sheet: Data Backup Recovery
Veritas NetBackup 6.0 Server

- **Storage Networking**—NetBackup software supports a broad range of tape library and tape drive interconnect technologies from leading vendors. Dynamically share individual tape drives, or utilize the optional NetBackup for NDMP agent to help protect popular NAS devices.

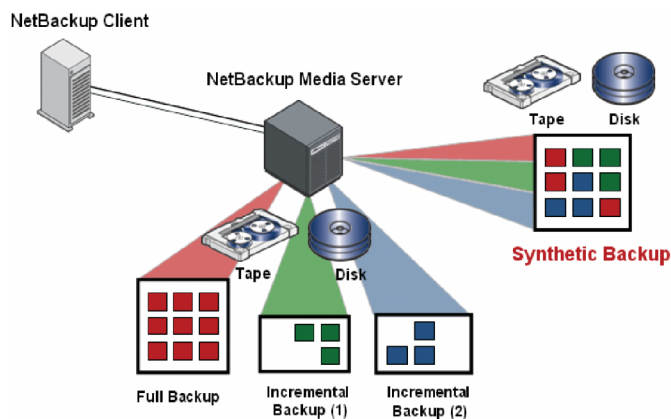

Figure 2. Synthetic backups consume less network bandwidth and provide quick client restores.

Disk-Based Data Protection and Synthetics

Veritas NetBackup software’s disk-based data protection solutions offer near-instant data recovery while improving backup performance and reducing exposure to data loss.

Veritas NetBackup software enhanced disk staging capabilities give NetBackup users additional flexibility when configuring their backup and recovery strategy. Disk staging can facilitate faster backups and restores since there is no tape device latency, and the nonmultiplexed backup images generated through staging can be used for faster recovery from tape.

Veritas NetBackup software delivers synthetic backup functionality that significantly enhances backup and recovery operations. NetBackup users can store their incremental backups on disk and then synthesize them into a full backup and process the data to tape, helping to reduce the time required to perform a recovery. NetBackup backs up new or changed files only once, decreasing the backup impact on the application host. Synthetic backups reduce the amount of data being moved over the network, minimizing the network bandwidth required for backup and recovery.

NetBackup Disk-Based Data Protection Solutions

Backup to Disk	<ul style="list-style-type: none"> • Leverages the performance benefits of disk for data protection storage
Disk Staging	<ul style="list-style-type: none"> • Automates backups to disk and relocation to long-term storage
Synthetic Backups	<ul style="list-style-type: none"> • Creates new, streamlined backup image from previous full and incremental backups
Virtual Tape Option	<ul style="list-style-type: none"> • Support for third-party virtual tape products
Desktop and Laptop Protection	<ul style="list-style-type: none"> • Continuous disk-based data protection whether in the office or on the road

Disaster Recovery

To help enable fully automated disaster recovery, NetBackup software offers an option for complete vault management—Veritas NetBackup Vault. This option helps simplify tape rotation and the creation and management of tape duplicates for offsite vaulting.

Fact Sheet: Data Backup Recovery Veritas NetBackup 6.0 Server

Vault manages the ejection of tape duplicates to the robotic Cartridge Access Port (CAP) or Media Access Port (MAP), the creation of pick/pull reports, and the monitoring of the retention periods for offsite media. NetBackup Vault facilitates the management of duplicate media created either concurrently with the primary backup or at a scheduled time, such as during nonproduction hours.

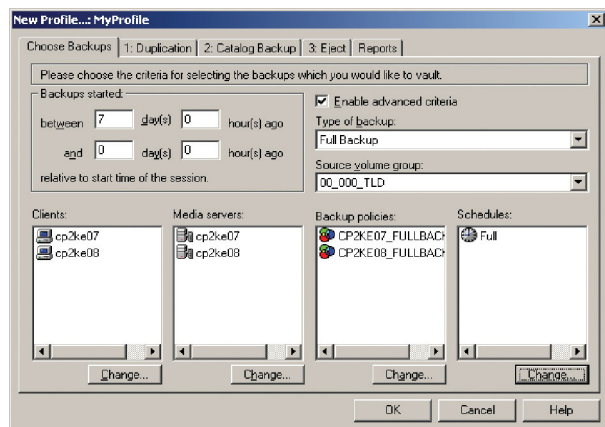

Figure 3. Veritas NetBackup Vault software provides highly configurable vaulting profiles that allow the user to choose the criteria for selecting the backups that should be sent offsite.

The Veritas NetBackup Bare Metal Restore option is designed to automate and streamline the server recovery process, making it unnecessary to manually reinstall operating systems or configure hardware. Using simple commands, complete server restores can be accomplished in a fraction of the time without extensive training or tedious administration. One solution addresses the demands of a variety of platforms, helping to eliminate the need for customized restore procedures on each platform. Server restores will be faster, easier, and more successful, the result being that your organization will be back online fast.

- Fully Automated System Recovery
- Dissimilar System Restore for Windows systems
- Point-in-Time Restore
- Restores Machine Configuration Information
- Windows, UNIX, and Linux support

Fact Sheet: Data Backup Recovery

Veritas NetBackup 6.0 Server

NetBackup Features	Benefits
Performance	
Synthetic Backups	Enables quick client restore from a single backup image. Synthetic backups consume less network bandwidth and decrease the impact on the application host.
Disk Staging	Disk staging facilitates faster backups and restores since there is no tape device latency, and nonmultiplexed backup images can be used for faster recovery.
Checkpoint/Restart	Allows a failed backup or recovery job to be resumed from the last checkpoint. If either a backup or a recovery job fails, the issue causing the failure can be corrected or the job can be resumed from that last checkpoint rather than at the beginning of the job. This saves valuable time. Backup and recovery jobs can also be suspended and resumed as necessary.
Multiplexed Backup	Ability to write multiple data streams from one or more clients/servers to a single tape drive for optimum performance.
Inline Copy	This feature enables the creation of multiple concurrent backup images, each with unique retention attributes, run either simultaneously with the primary backup or after completion of the primary backup. For disk-to-disk and/or disk-to-tape backups.
Online NetBackup catalog backup	Online full or incremental NetBackup catalog backups are possible while backup and recovery jobs are running. Significantly improves data Recovery Point Objectives (RPO) and Recovery Time Objectives (RTO).
Management and Reporting	
Tape volume, drive, and library viewing	Report on tape utilization, drive configuration, and more.
Error message identification, categorization, and troubleshooting	Easily diagnose problems without having to parse transaction logs. Error explanations and recommended actions have been integrated into NetBackup interfaces to further simplify troubleshooting.
Media Management	
Enterprise Media Manager	Centralizes NetBackup media and device databases. Improves scalability.
Automatic robotic/tape drive configuration	Provides the ability to specify policies for the automatic generation of drive names. Helps to greatly reduce the time required to configure tape devices. Automatically configure swapped tape drives.
Broad tape device support	Support for all leading tape device providers, including ADIC, Compaq, Dell, Exabyte, HP, IBM, Overland Data, Qualstar, Quantum, Sony, Spectra Logic, StorageTek, and Sun, enables enterprises to select best-of-breed technologies.
Heterogeneous Support	
Broad platform support	Support for all major UNIX platforms, Microsoft Windows, Linux, Novell® NetWare, and others, allowing enterprises to leverage their current infrastructure or choose best-of-breed technologies to handle their data protection requirements.
Support for leading networking topologies	Leverage Network Attached Storage (NAS), Gigabit Ethernet (GbE), and more for backup and recovery.

Fact Sheet: Data Backup Recovery

Veritas NetBackup 6.0 Server

NetBackup Agent/option	Benefits
Bare Metal Restore Option	Automated server recovery option that streamlines the recovery process and accelerates complete system restores of Windows, UNIX, and Linux servers.
Desktop and Laptop Option	Extends enterprise data protection to the user level. Automates the copy of data to network shares or file servers while allowing for the synchronization of multiple systems.
Encryption Option	NetBackup software's low-impact encryption option ensures the data is secure before it leaves the client. Data can be encrypted at the 40-, 56-, 128-, or 256-bit levels.
NDMP Option	Provides reliable, high-performance data protection for NDMP-enabled Network Attached Storage (NAS).
Shared Storage Option	Enables dynamic tape drive sharing between NetBackup media servers and NDMP NAS devices. Helps increase tape drive utilization and lowers the number of total drives required
Vault Option	Integrated module for complete, automated offsite tape management, from the creation of duplicates to be brought offsite to the tracking of offsite media retention periods for determining tape reuse and more.
Virtual Tape Option	Provides NetBackup support for third-party disk-based virtual tape offerings. IT administrators can quickly configure and integrate virtual tape disk-based data protection technology into existing NetBackup configurations and policies. Separate StorageTek Virtualization Option available.
