

Protect what you value.

McAfee Total Protection for Endpoint *(Formerly McAfee Total Protection for Enterprise)*

Stronger protection, greater compliance, lower costs with one integrated solution

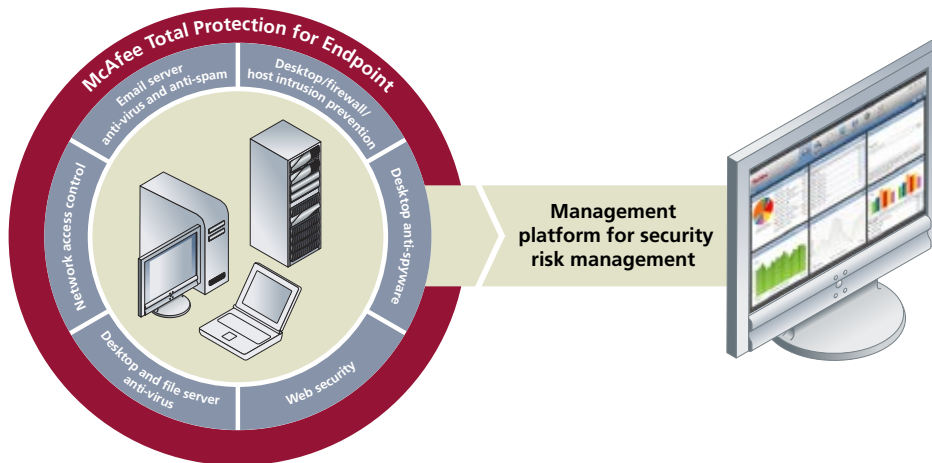

Providing a secure environment for your business environment is complex. Evolving threats make it easy for cybercriminals to illegally steal access to information; compliance regulations force companies to increase safeguards for data and deploy stronger security; and the growing number of disparate and point products increase management costs and security complexities. To stop these evolving threats, you need stronger protection with greater compliance while lowering your overall costs.

Effective endpoint security was once a straightforward process. All you had to do was update your anti-virus software. But now, you face a constant stream of worms, spyware, Trojans, bots, rootkits, hackers, identity thieves, and other targeted attacks. And with the stringent requirements for regulatory compliance, the risks are higher than ever.

You need a solution that delivers total protection, but is easy to deploy and manage. McAfee® Total Protection for Endpoint *(formerly McAfee Total Protection™ for Enterprise)* provides stronger protection that protects data, ensures greater compliance, and lowers operational costs—the industry's first truly integrated system security. McAfee Total Protection for Endpoint stops malware, rootkits, spyware, exploits, bots, spam, and hacker attacks. With our web

security, you know your employees can safely search the web. And Total Protection for Endpoint is managed through a single integrated console, reducing time and resources needed to manage security. Our advanced solution does all that, and adds network access control (NAC) to enforce security policy.

| | Total Protection for Endpoint—Advanced | Total Protection for Endpoint |
|--|--|-------------------------------|
| Network access control | ✓ | |
| Desktop and file server anti-virus | ✓ | ✓ |
| Desktop anti-spyware | ✓ | ✓ |
| Desktop host intrusion prevention and firewall | ✓ | ✓ |
| Web security | ✓ | ✓ |
| Email server anti-virus and anti-spam | ✓ | ✓ |
| Single management console | ✓ | ✓ |

Data Sheet | McAfee Total Protection for Endpoint

You could patch together a collection of individual products, but you still would not get the capabilities that you get with McAfee Total Protection. That's because we integrate technologies for a complete solution that is more effective than the sum of its parts.

Total Protection for Endpoint and the Advanced version of Total Protection for Endpoint with NAC offer unmatched protection. You can finally minimize risk with lower costs by continuously and proactively blocking threats while enforcing endpoint policy.

- Proven comprehensive protection—anti-virus, anti-spyware, anti-spam, desktop firewall, intrusion prevention, and NAC
- A single, integrated console lowers cost of managing and increases visibility
- Straightforward and flexible NAC policy definition; integrated and centralized console via McAfee ePolicy Orchestrator® (ePO™), predefined compliance checks in plain English, and granular policies
- Renowned virus protection for the hardest systems to manage—desktops and file servers
- Desktop anti-spyware uses true on-access scanning to identify, proactively block, and safely eliminate potentially unwanted programs, which can leak information to unauthorized sites on the Internet
- Desktop host intrusion prevention proactively protects against system vulnerabilities and reduces patching headaches
- Desktop firewall protects remote and traveling clients and reduces the threat of network-borne threats
- Integrated web security provides web safety information to end users to inform them of potentially malicious web sites that harbor spyware, viruses, and other threats
- Email server anti-spam and anti-virus stand guard over your messaging servers with comprehensive virus protection and content filtering

Management that Scales to Any Enterprise

McAfee ePO is a single, centralized, web-based console that manages security and enforces protection. ePO provides unmatched, effective, and cost-efficient system security management, including graphical reports that continually inform you of your security posture. It also ensures compliance with system security policy—regardless of

location—and helps prevent costly business disruptions from today's sophisticated attacks. This integrated management platform lowers the cost of managing security across the endpoint, network, and gateway.

Proactive Malware and Spyware Protection

McAfee's true on-access scanning prevents malware, spyware, and other potentially unwanted programs from installing and infecting your systems. Catch a threat once and stop it before it installs and spreads. That is much more effective than waiting until it has had a chance to multiply. Our proactive technology protects your system from unknown as well as known threats, with behavioral-based technology that quickly stops unknown threats before they have a chance to compromise your system security.

Zero-Day and Vulnerability Shielding Protection

Vulnerability shielding provides automatic update signatures that shield you from vulnerabilities on desktops and servers and enables a more structured patching process. Combined with McAfee's patented behavioral protection technology, which prevents buffer overflow attacks, you get the most advanced system vulnerability coverage on the market today.

Advanced Email Virus and Spam Protection

Total Protection for Endpoint scans your inbound and outbound emails for spam, inappropriate content, and harmful viruses. Suspicious emails are quarantined to prevent evolving email threats from impacting your network and users.

Extensible Architecture and Investment Protection

All of this advanced protection is available for a small incremental investment that leverages the security infrastructure that you already have in place. And the extensible architecture of both Total Protection for Endpoint and Total Protection for Endpoint—Advanced allows you to leverage your infrastructure as a foundation for future security and risk management initiatives.

Protection for Virtual Environments

Companies must take advantage of deploying Total Protection for Endpoint in a virtualized environment to ensure these virtual environments are free from malware or other security risks. These virtual environments are under the same or more security pressures as physical systems and should

be fully protected. Total Protection for Endpoint will provide comprehensive protection for these virtual systems.

Accessible Network Access Control

The Advanced version of Total Protection for Endpoint includes NAC, which prevents non-compliant, infected, and misconfigured systems from jeopardizing your business by stopping them when they request access to your network. Total Protection for Endpoint—Advanced with NAC keeps you updated with new threat information while enforcing compliance and good health of networked systems, all while addressing concerns with cost, manageability, and complexity of most NAC solutions.

Greater Compliance

Total Protection for Endpoint helps you meet your compliance requirements by limiting access to non-compliant systems, providing automated reporting through ePO, and integration with McAfee or third-party compliance tools.

Protected by McAfee Avert Labs

McAfee Avert® Labs combines world-class malicious code and anti-virus research with intrusion prevention and vulnerability research expertise. Avert Labs protects customers by providing cures that are developed through the combined efforts of our researchers and Avert AutoImmune technology, which applies advanced heuristics, generic detection, and ActiveDAT technology to generate cures for previously undiscovered viruses.

McAfee Solution Services

Along with our McAfee SecurityAlliance™ partners, McAfee offers a wide variety of services to help you assess, plan, deploy, tune, and manage your security. Learn more at www.mcafee.com/us/enterprise/services/product_consulting/.
