

NETWORK SERVICES OVERVIEW

In today's competitive environment, organisations are seeking ways to improve business processes, agility, security, and productivity. To achieve these goals, it is vital to have an effective network infrastructure that has been tailored to meet your organisation's specific requirements.

Insight's Networking Services ensure our client's IT resources are aligned with their business objectives, enabling them to meet their technology vision now and in the future.

▼ Network Design

Insight works in multi-platform and multi-protocol networks including cabling and routing systems, network management options, servers, and workstation platforms, delivered across Local / Wide Area Network (LAN / WAN) environments. This service includes:

- Pre-sales consultancy & site survey
- Detailed Network Diagrams
- Detailed Network overview
- Specification costing
- Comprehensive Project Plan
- Installation overview
- Post Sales support

▼ Network Implementation

In order to offer a higher level of competitiveness, a network implementation must offer optimum efficiency at a reasonable cost to ensure maximised return on investment. Insight plans each network installation in detail using the latest technology and basing the solution on an organisation's needs and cost considerations. This service includes:

- In depth analysis of network requirements
- Preparation of detailed installation design
- Detailed design and implementation
- Installation of equipment
- Full testing of all equipment
- Handover documents
- Client training and ongoing support

▼ Connectivity

The transfer of information both internally and externally is vital to every organisation. Insight offers a broad range of connectivity products from fixed priced to bespoke specialist solutions including, but not limited to:

- Ethernet
- Leaded lines
- SDSL (Symmetric Digital Subscriber Line)
- SHDSL (Symmetric High-Bit-Rate Digital Subscriber Loop)
- ADSL (Asymmetric Digital Subscriber Line)
- ISDN (Integrated Services Digital Network)
- Managed Wide Area Network (WAN) services

Insight also provides managed firewalls, including Nokia checkpoint and MPLS (Multi-Protocol Label Switching) and IP-VPN (Virtual Private Network) solutions.
