BACKUP & RECOVERY

EFFECTIVE BACKUP & RECOVERY STRATEGIES

Backup is undoubtedly one of the biggest issues for IT and network managers today. Explosive growth in business information has meant that many organisations have had to quickly adapt and grow their storage environment to cope with excessive demand. One of the challenges arising from this unplanned growth has been to protect and backup hugely increasing volumes of data.

Organisations require an effective Backup & Recovery strategy to ensure valuable business information can be restored reliably and efficiently when required

▼ Insight Offering

Insight's Backup & Recovery Solutions enable our clients to quickly gain control over their backup and restore environments, thus dramatically reducing immediate risk of operational failure and consequent data loss. In-depth experience and vendor independence ensures that heterogeneous environments can be swiftly assessed and the right solution implemented.

Following initial assessment of your existing environment, including systems, storage, applications and business requirements, Insight will produce a detailed project plan with defined checkpoints prior to entering the deployment stage. Ongoing management of the implemented solution can be provided, which will be tailored to suit individual client requirements.

▼ Service Guarantee

Through employing Insight's expertise, issues such as unproven processes, backup uncertainty, high rates of backup failure, window over-run, capacity planning and inability to meet Recovery Point Objective (RPO) and Recovery Time Objective (RTO) goals can all be addressed via a co-ordinated project.

With a track record of providing solutions from a single tape drive to a fully integrated Information Lifecycle Management solution, involving Tape, and Disk based backup devices, Insight will work with you to meet even the highest level of RPO and RTO objectives to provide solutions with virtually seamless data recovery.

Insight's independent approach ensures the most appropriate technologies and solutions are matched to the strategy, while our industry leading skills and experience will also be engaged to deploy and manage the solution.

▼ The Benefits

- Increase the visibility into backup operations
- Reduce backup time
- Remove the bottleneck from the LAN
- Remove the incremental costs associated with backup overruns such as overtime and additional media costs
- Reduce the risk of restoration failure by deployment of rigorous backup processes
- Reduced administration costs through centralised management of backup processes
- Ensure best-in-class processes and technologies are in use
