DISASTER RECOVERY (DATA)

RESTORE OPERATIONS AT LIGHTNING SPEED WITH INSIGHT'S DR SOLUTIONS

In the event of a natural or human-caused disaster, a correctly implemented Disaster Recovery solution can quickly recover your critical data and applications with minimal interruption. This enables off-site replication of data and services to fully protect your mission critical IT environments. DR forms a subset of Business Continuity, which focuses on avoiding or mitigating risks, while DR restores the organisation after a disaster has occurred.

A Disaster Recovery solution must be based on a solid Business Continuity plan that has taken into account the reality of the business requirements for recovery. This must encompass the:

Recovery Point Objective (RPO): This is the age of files that must be recovered from backup storage for normal operations to resume if a computer, system, or network goes down.

Recovery Time Objective: The period of time within which systems, applications, or functions must be recovered after an outage, for example one business day. RTO's are often used as the basis for the development of recovery strategies, and as a determinant as to whether or not to implement the recovery strategies during a disaster situation.

▼ Insight Disaster Recovery Solutions

Insight's DR Solutions help client organisations make significant, systemic improvements to their existing DR environments. This delivers increased readiness to meet operational Service Level Agreements (SLAs), be they defined by internal efficiency and/or scalability, or by external compliance demands. The service takes existing DR planning to higher levels, ensuring alignment of technology, people and processes with overall strategic objectives and general Business Continuity regimes.

Insight offers different product/service portfolios for different client scenarios, ensuring a bespoke solution is always delivered. Understanding business requirements for application performance and data protection will allow an organisation to make informed choices between various data protection strategies. Insight's DR solutions focus around data replication and backup, ensuring the ability to resume services locally and/or remotely with minimal impact on your business operations.

▼ The Benefits

Insight provides fast, simple and reliable DR solutions that are easy to install, deploy, and manage:

- Reduced/mitigated risk of data loss
- Cost-optimised delivery of potentially unused facility
- Identified, achievable and improved RPO/RTO goals
- Demonstrable compliance with both internal and external regulatory standards
- Balance DR capability with defined strategic goals
