

STORAGE SERVICES

STORAGE DESIGN & IMPLEMENTATION SERVICES

TAILOR YOUR STORAGE INFRASTRUCTURE TO OPTIMISE BUSINESS PERFORMANCE

Insight's Storage Design & Implementation service delivers far more than simple 'installation' of a given solution. Insight identifies and develops an organisation-wide adoption strategy for a dynamic storage infrastructure within your overall business environment, delivering a solution that encompasses people, products, and processes.

▼ Design

Insight works with clients to understand, develop, and document the business requirements for the deployment of storage hardware, software and peripherals. The design phase encompasses a thorough assessment of both technical and logistical requirements:

Technical Requirements:

Insight assesses and documents all technical matters that might impact the deployment, including current technology in place and short and long-term plans for growth

Logistical Requirements:

Insight documents and manages all logistical matters that will impact the project, including number of users to be deployed, desired project completion date and any constraints.

▼ Implementation

Implementation is then carried out, subject to ratified industry standards and de-facto Best Practice, by a highly qualified, seasoned and accredited team of consultants, working under formal PRINCE2 Project Management.

The resultant technology solution is then optimally aligned to meet your business demands.

▼ Service Provision

Insight's storage specialists will work closely with you to:

- Analyse your storage requirements
- Link storage technology, manageability, processes, and roles to your business objectives
- Design a storage infrastructure to suit your specific needs
- Integrate storage tools, processes, and people to help ensure a cohesive storage environment
- Plan the steps necessary to implement your storage solution
- Provide advice on configuration and implementation issues
- Provide a single point of contact and accountability for service delivery

▼ The Benefits

- Minimised risk through implementing the storage solution that best suits your needs
- Protection for your current investments in people, skills, and software
- Integrated new technologies into your existing environment
- Controlled, planned delivery of envisaged solutions - to manageable timelines and predictable costs
- Best-practice implementation according to industry standards
- Cost and performance optimised solutions
